CORRSYS-DATRON establishes sensor calibration facility in India

Now, for the first time in India, CORREVIT® Optical Sensors can be calibrated and serviced at a facility fully authorized by CORRSYS-DATRON Sensorsysteme GmbH.

The new calibration and service facility was opened in October, 2006 at Automotive Test Systems (ATS) in Pune, India. This is the first authorized calibration facility to be established by CDS aside from the calibration centers at the company's German and North American headquarters locations.

Mr. Carsten Richter, Head of Service at CORRSYS DATRON, installed the new calibration simulator, and Mr. Klaus Weimert, C.E.O of CORRSYS-DATRON inaugurated the facility.

This new installation clearly indicates the ideology of CORRSYS-DATRON and Automotive Test Systems, wherein customers in India and surrounding countries now have fast, convenient access to sensor service and calibration.

An intensive ten-day training program was conducted by Mr. Richter to provide ATS engineers with the skills and expertise required to accurately service and calibrate CDS sensors. This was the first of several such programs scheduled to take place over the next six months. Upcoming training sessions will be held at CDS International Headquarters in Wetzlar, Germany and at ATS in Pune, India. Ongoing upgrades and enhancements will be made at ATS, based on recommendations and guidance provided by CDS engineers.

For our customers in India, the need for local calibration and service of CDS Optical Sensors and Data acquisition Systems is now satisfied. For even greater convenience, genuine CDS components (lamps, cables, etc.), are now available at ATS locations in Delhi, Pune and Chennai.
